

CropSentinel

Mobile Testing Guide

FAR AWAY 2026

Version: Pre-D6 Testing Release

Release Target: Android Preview APK & Expo Go

Section 1 - Installation Instructions

Tester Steps:

1. Download the CropSentinel-preview.apk file.
2. Open device Settings, navigate to security/apps, and allow 'Unknown Sources'.
3. Tap on the downloaded APK to install it on your Android device.
4. Open the installed CropSentinel application.

Expected Result:

CropSentinel splash screen (constellation scanning layout) renders correctly followed by the Onboarding screen.

Verification Result:

PASS

FAIL

Section 2 - Demo Mode Testing

Tester Steps:

1. Progress past the onboarding screen and tap 'Get Started'.
2. Tap the primary 'Login' button (accepts credentials instantly in demo mode).
3. Tap the settings gear icon in the header.
4. Toggle 'Demo Mode' to ON. Return to the dashboard.

Expected Result:

Green 'DEMO MODE ACTIVE' banner slides down and is visible at the top of the dashboard.

Verification Result:

PASS

FAIL

Section 3 - Farm Detail Testing

Tester Steps:

1. From the My Farms list dashboard, select 'Marathwada Sugarcane Farm'.
2. Verify health score animated circular indicator.
3. Scroll down and verify the static map preview card.

Expected Result:

Farm details and values load cleanly. Static map card renders boundary with 'Satellite imagery preview' badge.

Verification Result:

PASS

FAIL

Section 4 - Simulate Drought Testing

Tester Steps:

1. Open 'Marathwada Sugarcane Farm' while Demo Mode is active.
2. Locate the yellow 'Simulate Drought' action button.
3. Tap 'Simulate Drought' and observe the score change.

Expected Result:

Health score smoothly counts down from 78 to 41. Metrics transition to alert states without freezes or crashes.

Verification Result:

PASS

FAIL

Section 5 - Alerts Testing

Tester Steps:

1. Open the Alerts Feed from the bottom navigation bar (bell icon).
2. Verify alert cards lists (e.g. Critical Moisture Drop, NDVI warning).

Expected Result:

Alerts display properly with priority tags (High/Medium) and relative timestamps.

Verification Result:

PASS

FAIL

Section 6 - Intervention Testing

Tester Steps:

1. Tap any active alert inside the Alerts Feed.
2. On the Intervention Detail screen, review metrics and tap 'Apply Recommendation'.
3. Confirm local notification triggers in your device system tray.

Expected Result:

A clean Material 3 confirmation dialog pops up and a local notification is successfully pushed.

Verification Result:

PASS

FAIL

Section 7 - Add Farm Testing

Tester Steps:

1. Tap the floating '+' button on the My Farms dashboard.
2. Type a custom name in the Farm Name field (confirm keyboard focus works).
3. Select Crop Type (Sugarcane) and Soil Type (Clay) from dropdown selectors.
4. Tap 'Choose Farm Location' and type coordinates (Latitude: 22.5937, Longitude: 78.9629).
5. Tap 'Use Coordinates', then tap 'Save Field'.

Expected Result:

Location coordinates update AddField screen instantly. Tapping 'Save Field' shows success overlay with prepared JSON payload.

Verification Result:

PASS

FAIL

Section 8 - Language Testing

Tester Steps:

1. Go to Settings (gear icon in header).
2. Switch the Language selection.
3. Return to the dashboard and review all text labels.

Expected Result:

Screen labels, tabs, and instructions switch to translated alternates instantly.

Verification Result:

PASS

FAIL

Section 9 - General UX Feedback

Tester Steps:

1. Verify transition animation speed and layout responses.
2. Test keyboard dismiss interactions by tapping screen background.

Expected Result:

App animations run smoothly. User navigation feels intuitive, responsive, and polished.

Verification Result:

PASS

FAIL
